

Secure Health Link

- Who is responsible for your health?
- Do you track your health data?
- Who controls your family's health records?
- If you or a family member is injured, will every doctor have a secure link to your health data on demand?

In the world of healthcare, you own your health record. Currently your health record is probably in many different files with various doctors, hospitals, insurers and pharmacies. It is entirely possible that none of those records will be immediately available when you need help the most.

Introducing: [Secure Health Link](#) - The first secure, fully customizable family health record database that is controlled entirely by the patient and available on-demand to selected healthcare providers.

How does it work? The patient enters the data they consider important – Health History, Cardiologist's name, address and phone, types of medications, allergies, etc. into a secure database. They can even upload images such as their EKG. The website and a password are carried by the patient in their wallet or on a sticker on their license. At the Patient's option, Healthcare professionals who are members of approved Regional Health Information Organizations (RHIOs) may also be granted access.

Features

Personal and Family Health Records securely stored for you online:

- You control your own Private Health Record.
- Share or block your health data on your terms.
- Share only what you want, only with those you select.

Comprehensive, point-of-care snapshot of your health.

Each Family Member can have a personal account.

Lists Doctors, Insurers, Medical History and all Contact Information.

Wallet Card and/or Web Address Stickers for each Family Member.

Users can sign and upload Health Record Release Authorizations.

Users can grant access to linked hospital Networks.

Benefits

Track and chart your health data including:

- | | |
|----------------|---------------------|
| Blood Pressure | Blood Sugar |
| Cholesterol | Diet / Weight |
| EKG | Addiction Cessation |

You identify your primary health issues in a record you control

Share all (or parts) of your record with healthcare providers.

Secure access to your information means better healthcare.

Emergency Personnel will get all the relevant facts.

Hospitals will know your health issues and your doctor.

List next of kin, DNR Orders and Spiritual Preferences.

Insurance Company Benefits

For less than the cost of an advertising campaign, the Insurance Company can:

Reduce the net cost of healthcare delivery:

- Allows faster, more accurate delivery of healthcare services
- Reduces the risk of service duplication
- Flags contraindications
- Increases overall accuracy of initial claims

Provide a tangible benefit to Employers and Members

- Increase peace of mind for Members while building goodwill with Insurer and Employer
- Reduce Member absenteeism through
 - Increased employee wellness
 - Shortened recovery periods

Accomplish the goal of having Members take an interest in their health

Be an information portal for educational materials

Increase Member retention rates and awareness through Insurance Company banners and Employer banners

Administration

The Insurance Company simply buys seat licenses. They can then be distributed to individual Members or Members through their Employers.

Software Modules Included:

Insurance Manager - to establish Company Accounts (Employers) and Member Accounts

Employer Manager - to allow local account administration and oversight by the Employer

Account Manager - to allow Members (patients) to manage/edit their family accounts.

Training Modules, videos and FAQ Lists to show the simplicity of the system.
